Art Unit: 3737

DETAILED ACTION

1. Acknowledgement is made of the amendment filed 10/2/2006.

Response to Arguments

2. Applicant's arguments with respect to claims 1-73 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

- 3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-5, 9-14, 17-20, 32-35, 40-45, 48, 51, 66, 67, 70, and 73 are rejected under 35 U.S.C. 102(e) as being anticipated by Cosman (U.S. 6,405,072 B1).

Regarding **claims 1-5**, **9-14**, **and 17-20**, Cosman teaches a method for use of a computer-assisted surgery system during a medical procedure, comprising: receiving information on an anatomical target region of a patient (col. 7, lines 1-3); tracking the position of a surgical tool as the tool is moved by a surgeon in performing the medical procedure (col. 7, lines 12-14); determining a scalar distance between a current position of said tool and the anatomical target region (col. 7, lines 3-4); and providing to the user

of the surgical tool a visual indication of said scalar distance (Fig. 9b; col. 17, lines 21-32).

Regarding claims 32-35, 40-45, 48, 51, 66, 67, 70, and 73, the system taught by Cosman is fully capable of performing all the functional limitations recited in the claims.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 6, 7, 15, 16, 36-38, 46, and 47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cosman in view of Taylor et al. (U.S. 5,950,629).

Regarding claims 15 and 46, Cosman teaches the limitations as discussed above but fail to explicitly teach providing tactile feedback. However, in the field of positioning surgical instruments, Taylor et al. teach the step of using tactile feedback while positioning a surgical instrument (col. 8, lines 29-30). Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to include using tactile feedback in order to assist the surgeon in positioning the surgical instrument (col. 8, lines 30-31).

Regarding **claims 16 and 47**, vibration is a type of tactile feedback and would be obvious to one of ordinary skill in the art to include providing a vibration as an indicator

in order to assist the surgeon in position the surgical instrument (Taylor et al., col. 8, lines 30-31).

Regarding **claims 6, 7, and 36-38,** Cosman teaches a display unit for indicating positional information (Fig. 7, Item 39). Cosman and Taylor et al. teach the limitations as discussed above but fail to explicitly teach the location of the display. However, providing the display integrated with the linac system or a haptics/tactile device is well known to those skilled in the art. Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to include integrating the display with a haptic device or the linac system in order for the operator to easily watch the updated distance while controlling the tool. Furthermore, such a modification would be considered a step of making integral (see *In re Larson*, 340 F.2d 965, 968, 144 USPQ 347, 349 (CCPA 1965)).

7. Claims 8 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cosman in view of Taylor et al., further in view of Sumanaweera et al. (U.S. 6,443,894 B1). Cosman and Taylor et al. teach the limitations as discussed above but fail to explicitly teach using color as a visual indicator. However, in the field of medical imaging, Sumanaweera et al. teach using color as a visual indicator (col. 13, lines 48-52). Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to use color as a function of distance as the visual indicator in order to alert the user of the distance between the tool and the target (for motivation see (col. 13, lines 50-52, "color is assigned for different distances").

Application/Control Number: 10/621,119

Art Unit: 3737

8. Claims 21, 22, 25-31, 49, 50, 52-54, 57-64, 68, 71, and 72 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cosman in view of Wodicka et al. (U.S. 5,445,144). Cosman teaches the limitations as discussed above but fails to explicitly teach an audio alert based on distance. However, in the field of medical positioning, Wodicka et al. teach using audio alerts based on distance (col. 14, lines 42-45). Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to use an audio alert in order to alert the user of a distance or position status of the tool (for motivation see col. 14, lines 42-45).

Page 5

9. Claims 23, 24, 55, 56, 65, and 69 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cosman in view of Wodicka et al., further in view of Taylor et al. Cosman and Wodicka et al. teach the limitations as discussed above but fail to explicitly teach providing tactile feedback. However, in the field of positioning surgical instruments, Taylor et al. teach the step of using tactile feedback while positioning a surgical instrument (col. 8, lines 29-30). Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to include using tactile feedback in order to assist the surgeon in positioning the surgical instrument (col. 8, lines 30-31).

Cosman and Wodicka et al. teach the limitations as discussed above but fail to explicitly teach the positioning of the audio alert system. However, providing the alert system as integrated with the linac system or a haptics/tactile device is well known to

Art Unit: 3737

those skilled in the art. Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to include integrating the display with a haptic device or the linac system in order for the operator to easily hear the updated distance while controlling the tool. Furthermore, such a modification would be considered a step of making integral (see *In re Larson*, 340 F.2d 965, 968, 144 USPQ 347, 349 (CCPA 1965)).

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elmer Chao whose telephone number is (571)272-0674. The examiner can normally be reached on 9am-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on (571)272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
